WINTERIZATION AND STORAGE OF RAIN BARRELS

- ◆ It is recommended to disconnect the roof leader downspout from the rain barrel and reconnect the leader to a splash pan to drain water away from the foundation of the building.
- ◆ Empty the water in the rain barrel. Ice will expand and may damage the rain barrel.
- ◆ Turn over the rain barrel to prevent the collection of snow or rain and store in safe area.
- ◆ Disconnect any rubber hoses and store indoors to prevent damage from freezing and cracking.

Recycle!
